

## **CARE - Comprehensive American Rights to Essentials**

Healthcare shouldn't be a fight. It shouldn't be paperwork. And it definitely shouldn't be profit.

But in America, it is.

We've built a system where families go bankrupt trying to stay alive, where doctors are burned out from bureaucracy, and where billionaires earn record profits off cancer treatment.

This isn't healthcare. It's economic violence.

And we can fix it. Logically. Structurally. Now.

CARE replaces the current for-profit insurance system with a transparent, public model designed around five simple principles:

- **If you need help, come get help.**

Everyone is in. No networks. No deductibles. No denials.

- **CARE keeps your doctor—and removes the middlemen.**

You still go to the same providers. The only thing missing is the bill.

- **Healthcare workers earn more, not less.**

Wages go up. Paperwork goes down. Bonuses are tied to performance, not volume.

- **Fraud dies in daylight.**

Every claim is tracked. Co-verified by patients. Audited by peers. Nothing to game.

- **The goal is the cure, not the charge.**

CARE invests in outcomes. Cures are funded. Elective care is optional. Mental health is essential.

### **How it works**

- One national system, funded by a monthly contribution of ~\$770/adult. Children are covered fully.
- No premiums, no co-pays, no surprise bills. Just direct care.
- All doctors and hospitals are included. If you're licensed, you're in.
- The CARE App tracks visits, logs feedback, flags issues, and lets patients co-sign their care.
- CARE replaces insurance with accountability: real-time transparency, peer audits, performance metrics.
- Specialized care is available when needed. Elective care is optional, and innovation is welcome.
- If you're sick, come get help. The system is designed to absorb cost, not avoid it.

## **Cost vs. Current System**

- The average American adult currently pays over \$1,000/month in premiums, co-pays, and indirect costs.
- CARE replaces that with a flat ~\$770/month.
- Administrative overhead drops by hundreds of billions.
- Drug prices are capped at 10% above cost. Equipment is priced by lifespan.
- Projected system-wide savings: \$1.2T-\$1.5T/year.

## **When CARE was run through an AI projection engine:**

**In 5 years:** - Millions more get care without going into debt. - Healthcare worker wages rise. Fraud drops. Preventative care surges.

**In 10 years:** - Chronic illness rates decline. - Rural hospitals reopen. - U.S. life expectancy begins to rise again.

**In 20 years:** - The U.S. becomes the global leader in affordable cures, not overpriced treatments. - Healthcare becomes the most trusted public institution in America. - "If you need help, come get help" becomes a cultural norm.

CARE isn't a government takeover. It isn't rationed medicine. It isn't a tax trap.

It's a reset.

Built on reason. Priced by logic. Powered by dignity.

We don't fix health insurance. We fix health.

This is CARE. Let's build it.
