

CARE – Impact on Providers and Patients

Impact on Providers (Doctors, Nurses, Staff)

1. Purpose Restored

CARE removes the chaos. No more arguing with insurers, no more billing battles, no more codes dictating care. Just medicine, delivered clearly.

2. Higher Pay, Less Red Tape

With insurance overhead removed, CARE raises base wages and funds bonuses tied to real-world results: better outcomes, fewer preventable complications, higher patient satisfaction.

3. Clinical Freedom

Doctors treat based on expertise—not billing formulas. No network games. No authorization mazes. The patient is the priority again.

4. Performance Without Burnout

Peer review, patient feedback, and outcome data shape rewards. CARE supports care teams with mental health training, smaller caseloads, and tech tools that lighten admin loads.

5. Career Growth in the System

Healthcare professionals can transition into specialized roles: peer reviewers, medical educators, emergency responders (via PHC), and more—without leaving the system.

6. Fewer Lawsuits, More Fixes

Malpractice gets replaced with structured peer remediation. If an error happens, another doctor helps fix it. Accountability is real—but rooted in healing.

💰 Impact on Patients (Everyone Else)

1. No More Denials

CARE guarantees access to medically necessary services. No more fights over what's covered. No more surprise out-of-network bills.

2. If You're Sick, You Get Help

From checkups to chemo, from mental health to maternal care—if you need it, you get it. No exceptions. No bankruptcies.

3. Predictable Monthly Cost

Flat ~\$770/month per adult. No premiums, co-pays, deductibles, or surprise bills. Kids are fully covered.

4. Continuity of Care

No more switching doctors due to network changes. Under CARE, your provider stays your provider.

5. Healthcare That Comes to You

Rural and underserved areas receive new investment, mobile clinics, and support from the Public Health Corps. Telehealth expands as a default.

6. You See the Numbers

CARE App shows cost data, provider performance, wait times, and personal records. Healthcare becomes transparent, not transactional.

7. Mental Health is Real Health

Covered fully. Tracked seriously. Treated with urgency and dignity.

8. You're a Partner, Not a Product

Your feedback shapes care. You co-verify services. You're part of a system that sees you as a person, not a claim.

CARE resets the contract between the healthcare system and the people it serves: **We help you when you're sick. We pay providers to heal—not to hustle.** It's a new deal—backed by logic, grounded in dignity.
