

IMMIGRATION: The Logic of Belonging Public Logic TL;DR Overview

THE PROBLEM: America's immigration system is a patchwork of delays, loopholes, and political performance. It leaves 11M+ people in the shadows, clogs legal pathways, and wastes billions on a border system that reacts instead of regulates.

THE SOLUTION: Public Logic Immigration Reform builds a system that: - Offers a one-time path to legality for those already here - Deploys drones + AI to secure the border smartly - Issues biometric digital IDs for all entrants - Creates a 2-year probation period tied to work/school - Replaces chaos with rule-based structure

10 CORE SHIFTS UNDER THIS PLAN: 1. Dual Entry Tracks: Humanitarian or Economic—no more lumped lines. 2. Digital Immigration ID: Every applicant gets traceable, secure status. 3. Probation First: 2 years of clean contribution required before permanent status. 4. Global Crime Checks: GCES system flags felons before they arrive. 5. Legal Absorption: One-time 18-month offer for undocumented residents to enter the system. 6. Drone-Secured Borders: Constant surveillance. Fewer agents. Smarter response. 7. Employer Accountability: Real-time worker ID checks + algorithmic payroll audits. 8. Sponsor Vetting: Family or employer sponsors are background-checked and monitored. 9. Public Oversight: Civic panels review edge cases. Transparency built in. 10. One System: Everything tracked. Nothing left to guess.

IMPACT SNAPSHOT: Based on logic-based projection models... - In 5 years: 10M+ undocumented legalized or removed. Border crossings drop 70%. - In 10 years: Citizenship rises. Shadow labor falls. Trust increases. - In 20 years: U.S. becomes global model of functional immigration.

THE LOGIC: If you want to live in the light, the door should exist. If you don't follow the rules, the system should see you coming.

IMMIGRATION SHOULDN'T BE A MESS. It should be a process.
