

Public Logic: Immigration Reform Plan

SUMMARY: The Public Logic Immigration Plan is a full-system redesign built to absorb undocumented populations, secure the border with digital tools, and replace dysfunction with enforceable logic. This document outlines the operational architecture, assumptions, fiscal projections, and response logic to anticipated objections.

I. LEGAL ENTRY STRUCTURE

Dual-Track Intake: - Humanitarian Track: Asylum, refugee, and crisis-based entry. - Economic Track: Employment, education, family sponsorship.

Pre-Entry Filter: - Global Criminal Exchange System (GCES): All entrants screened through international conviction database. - U.S. threshold standard applies (foreign infractions contextualized).

Entry Conditions: - Digital ID issued with biometric verification - Two-year probation period with employment/school requirement - Quarterly digital or in-person check-ins

Outcome: - A system where legal entry is easier than illegal presence.

II. UNDOCUMENTED ABSORPTION STRUCTURE

One-Time Legalization Offer: - Available to all undocumented residents present before the program window
- Requires: No felony record, verified identity, sponsor or proof of contribution

Conditions: - 18-month application window - Same 2-year probation as new entrants - Non-compliance = automatic disqualification + enforcement

III. ENFORCEMENT & COMPLIANCE INFRASTRUCTURE

Border Management: - Smart surveillance grid: drones, towers, thermal tracking - AI-monitored crossings with rapid-response team dispatch

Employer Oversight: - Real-time worker ID verification at point of hire - Algorithmic payroll audits detect off-book labor - Penalties: Fines, contract bans, license suspensions

System Redundancy: - All data mirrored across DHS, DOJ, and oversight system - Public dashboards show anonymized trends, violations, and case volumes

IV. COST MODEL

10-Year Implementation Budget: - Digital ID & Intake System: \$1.5B - GCES Development: \$500M - Border Surveillance Grid: \$3.0B - Absorption + Probation Infrastructure: \$2.5B - Employer Enforcement & Audit Tools: \$750M - Administration & Legal Aid Network: \$2.0B

Total: \$10.25B Initial / \$1.25B Annual Ongoing

V. FISCAL RETURN PROJECTIONS

Annualized Returns: - Tax Revenue from 10M+ Legalized Individuals: \$11B-\$18B/year - Reduced Border Enforcement Waste: \$5B/year - Reduced Emergency Care Expenditures: \$3B/year - Application & Citizenship Fees: \$1B-\$2B/year - Labor Market Stability: +0.5% GDP growth

Net Outcome: - Payback period: <3 years - Net 10-year benefit: \$80B-\$120B

VI. LONG-TERM IMPACT PROJECTIONS

In 5 Years: - 90% of undocumented population processed or removed - Border crossings drop by 70% - Undocumented labor market collapses - All new entrants fully tracked

In 10 Years: - Citizenship and civic participation up - Federal enforcement costs down - National wage standards improve - International migration cooperation increases

In 20 Years: - U.S. becomes global model for rational immigration - Zero-undocumented status becomes default - Public trust in system surpasses all-time highs

VII. PUBLIC LOGIC FRAMING

"It's not open borders. It's open books."

This is not amnesty. It's structure. Not theory—execution. A system where compliance is easier than avoidance, and contribution is rewarded with stability, dignity, and lawful integration.

We didn't open the gates. We closed the loopholes.

This is Public Logic applied to immigration. No slogans. No fear. Just a system that works.

VIII. OBJECTION HANDLING

Q: Isn't this amnesty? A: No. It's a one-time structured absorption with strict standards, ID tracking, and enforced probation. Non-compliance = removal.

Q: Doesn't this reward breaking the law? A: It resets the table once. After that, undocumented entry becomes near-impossible. There are no second chances after the reset.

Q: What stops abuse of the sponsor system? A: Sponsors are vetted, tracked, and audited. Fraud triggers disqualification and legal consequences.

Q: Won't employers still cheat? A: Not easily. Payroll audits, ID verification, and algorithmic flagging replace the honor system. Repeat offenders lose their licenses.

Q: Is the tech realistic? A: Yes. It's based on existing tools used in logistics, security, and finance—just finally applied to immigration.

Conclusion: The Immigration Reform Plan meets every Public Logic test: clarity, reason, enforceability, and public benefit. It doesn't promise utopia. It just ends the chaos—and builds something that finally works.
