

PUBLIC LOGIC IMMIGRATION PLAN: FAQ + OBJECTION HANDLING

"Got a problem with the plan? Ask better questions."

Q: Isn't this just amnesty with a new name? A: No. Amnesty is a free pass. This is a structured, one-time opportunity with rules, background checks, and a 2-year probationary window. No felonies. No hiding. No second chances.

Q: Doesn't this reward people for breaking the law? A: It resets the system once—and then closes the loopholes permanently. If you don't apply during the window, you're ineligible. Future illegal entry becomes traceable and enforceable. One clean break from dysfunction.

Q: Won't everyone just lie or fake documents? A: Try it. Biometric intake, global conviction database (GCES), and sponsor verification tools are built in. Fraud = instant rejection. It's safer to apply honestly than to attempt a workaround.

Q: What if someone's sponsor lies or bails? A: Sponsors are background-checked, accountable, and monitored. If they commit fraud, both they and the applicant are flagged. And the entrant is re-evaluated—without punishment for the sponsor's failure.

Q: How is this different from the current system? A: It replaces decades of vague forms and political chaos with a digital portal, real-time status tracking, and rules you can explain in two minutes. No more "wait 17 years for a green card." No more cages. No more guesswork.

Q: What if people fail probation or don't check in? A: They're flagged, reviewed, and—if necessary—removed. This isn't a trust fall. It's compliance with reminders, audit trails, and enforcement backup. Contribute or exit.

Q: Isn't a digital ID invasive? A: Only if you plan to hide. For everyone else, it means clarity, security, and access. You already use a digital ID to board planes, bank, and shop. This is no different—just applied to public structure.

Q: Won't this cost a fortune? A: The startup cost is real—around \$10B. But the payback happens in less than 3 years. New taxpayers, employer compliance, and border tech replace detention waste and shadow economies. This saves money.

Q: Why not just close the border completely? A: Because that's a fantasy. As long as there's opportunity, people will come. The real solution is to manage entry, identify bad actors, and give good actors a reason to use the front door.

Q: What happens if someone commits a crime after they're legalized? A: Depends on the crime. Nonviolent offenses = probation review. Violent crime = disqualification and removal. System integrity doesn't mean zero tolerance—it means reasoned, trackable consequences.

Q: Won't this make it easier to vote illegally? A: No. Legal status \neq voting rights. Citizenship only comes after 5+ years of clean compliance. Digital IDs verify status. Anyone caught voting fraudulently is permanently barred from citizenship—and prosecuted.

Q: Isn't this still too generous? A: The current system lets people stay for decades with no ID, no taxes, no vetting, and no plan. This system makes people earn their place. If anything, it's stricter—just finally functional.

Q: What's the real catch? A: That it works. Which means it removes excuses. It forces agencies to cooperate. It forces employers to comply. And it forces people—on every side—to choose order over noise.

Welcome to Public Logic. Now let's stop pretending broken is safer.
